

I Created this file as a reference in case I want to upload my own code to Git-Hub.

- **In that case, go to that file.**

المكان اللي انا فيه على الجهاز اسمه Working Directly

Remote Repo المكان اللي برفع في الاكواز زي > GitHub

الأوامر دي انا عاملها بحيث اقدر ارفع اي كود لي على GitHub من بحيث لو نسيت الأوامر من وقت لآخر:

first step create the repository in GitHub, and copy the repository link .

then go to the command line (cmder.exe)

1. git clone "repository link" form GitHub
2. dir ==> for display all file
3. git add (file name) or git add * (added all files)
4. git branch → Return the branch name → in my PC (main)
5. git remote -v → Return all Remote names → in my PC (origin)
6. git push Remote Name Branch Name → git push origin main
7. push files form Working Directly to remote repository
